- Structural system based on steel frame and lightweight wall panels, consisting of bottom structure, top structure, corner posts and firewall panels.
- Shape: 5950 (L)*3000 (W)*2800 (H) mm
- Compared with the traditional container, the steel frame and the plate are separated and packaged. Compared with the traditional container, it has the characteristics of convenient transportation, flexible structure, fast installation, green environmental protection and so on.

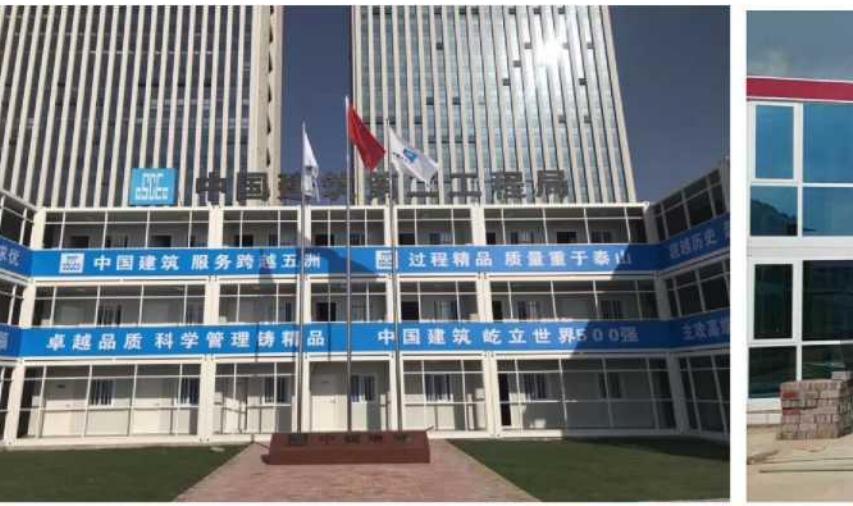

Product introduction

The prefabricated express container developed by the company after many years of research and development has many advantages such as stable structure, fast construction, environmental protection, and new materials, and is widely used in construction.

Product introduction

The standard size of the LCL box is 5.95m in length, 3m in width and 2.8m in height. It can also be customized according to customer requirements. The shape of the frame box conforms to the aesthetics of engineering and architecture. Color, the product meets EU export standards.

This product is customized and modularized with national standard steel. The amount of steel used is not less than that of the steel structure workshop. The color of the skeleton steel can be customized according to the user, such as Snow Mountain White, Zhongjian Blue, Construction Engineering Red, Engineering Gray, etc. Computer color matching, the frame is sprayed after pickling and phosphating, and the anti-rust and environmental protection grades meet the national standards.

Product Features

Modular production, on-site fully assembled assembly, convenient transportation, and quick on-site assembly without a crane. This product is connected with high-strength bolts without electric welding. It is environmentally friendly and quick to install and can be reused many times.

Product Features

The prefabricated fully assembled container has strong versatility. After the outer frame is formed, it can be made into multiple connected conference rooms and large office rooms according to customer requirements. And can be customized into tea kiosks, access control, mobile toilet containers, etc.

The wall panels of this product are made of A-grade fireproof sandwich panels, and the thickness of 50mm/75mm/100mm can be customized according to the needs of the region and users. It is also suitable for areas with high temperature, high cold, and high humidity. This product has no frame visible in the room, and it has high cleanliness and is convenient for high-quality decoration in the later period. The ground can be decorated with stainless steel checkered boards, composite floors, plastic carpets, skirting boards, etc.

Project cases

Assembly line production, automatic spraying. The strong supply response ability ensures the timely use of the construction site. Even if there is a large number of container projects, it can be completed quickly only by adding installation teams. The company has a design and production process for any room type, and designs the stacking, arrangement, inner stairs, inner corridors, sloped roofs, etc. of different container room types according to the needs of customers on site.
